

Designers' Guide to Eurocode 9: Design of Aluminium Structures

EN 1999-1-1 and -1-4

Designers' Guide to Eurocodes

Philip Tindall
Torsten Hoeglund

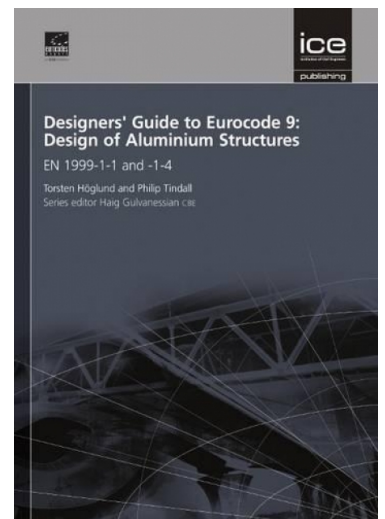

About the Book

Designer's Guide to Eurocode 9 covers the design of building and civil engineering works made from wrought and cast aluminium alloys. While aluminium is a lesser-used material, Eurocode 9 is a complicated document and there is currently very little guidance to its use.

The latest addition to the bestselling *Designers' Guide* series addresses the considerable demand for Eurocode guidance covering aluminium. *Designers' Guide to Eurocode 9* is written by 3 authorities on the subject, who were instrumental in drafting the original code and contains worked examples throughout.

This guide is essential reading for

- civil and structural engineers
- code-drafting committees
- clients
- structural-design students
- public authorities
