

Human/Technology Interaction in Complex Systems

Human Technology Interaction in Complex Systems

Eduardo Salas

About the Book

The focus of this ninth volume is on human/technology issues that arise from the design, development, application, operation, evaluation, and maintenance of advanced systems with regard to training in complex environments. Areas covered include: a user-oriented design analysis of a virtual environment training system, a cognitive task analysis technique for virtual environment training, advanced embedded team training, human centered automation for air traffic control, human performance modelling in system design, and scenario-based training.
