About the Book

Lessons from the Great Recession: At the Crossroads of Sustainability and Recovery examines global cases of environmental sustainability and economics in the context of nations from multi-disciplinary perspectives. The book discusses the high costs of decisions taken in response to the recent economic crises, which as a result have created a lack of investment in environmental and developmental considerations. This volume analyses the problems faced globally as economies try to build a sustainable future in the aftermath of the 'Great Recession'. The book observes concepts of sustainability in the post-recession and post-bailout world around aspects such as Fiscal / economic / social sustainability; Financial sustainability (sector risks etc.); Environmental sustainability. Chapters scrutinise the relationships between nations and supra state agencies such as the UN, EU, IMF etc. in the context of economic crises.
