

SURVIVING and
THRIVING
in **ACADEMIA**

DOCTORAL STUDY AND GETTING PUBLISHED

NARRATIVES OF EARLY CAREER RESEARCHERS

EDITED BY

RICHARD FAY • ACHILLEAS KOSTOULAS

DOCTORAL STUDY AND GETTING PUBLISHED

Surviving and Thriving in Academia provides short, accessible books for navigating the many challenges, responsibilities and opportunities of academic careers. The series is particularly dedicated to supporting the professional journeys of early and mid-career academics and doctoral students, but will present books of use to scholars at all stages in their careers. Books within the series draw on real-life examples from international scholars, offering practical advice and a supportive and encouraging tone throughout.

Series Editor: Marian Mahat, The University of Melbourne, Australia

Published Titles

Achieving Academic Promotion

Edited by Marian Mahat and Jennifer Tatebe

Getting the Most Out of Your Doctorate: The Importance of Supervision, Networking, and Becoming a Global Academic

Edited by Mollie Dollinger

Coaching and Mentoring for Academic Development

By Kay Guccione and Steve Hutchinson

Women Thriving in Academia

Edited by Marian Mahat

Academic Resilience: Personal Stories and Lessons Learnt from the COVID-19 Experience

Edited by Marian Mahat, Joanne Blannin, Caroline Cohrssen, and Elizer Jay de los Reyes

Academic Mobility and International Academics: Challenges and Opportunities

Edited by Jasvir Kaur Nachatar Singh

The Impactful Academic: Building a Research Career That Makes a Difference

Edited by Wade Kelly

Thriving in Academic Leadership

Edited by Sharmila Pixy Ferris and Kathleen Waldron

Supervising Doctoral Candidates

Edited by Chris Rolph

Building Communities in Academia

Edited by Melina Aarnikoivu and Ai Tam Le

Nurturing Wellbeing in Academia: How to Prioritise Your Mental Health

By Poppy Gibson

FORTHCOMING TITLES

Conceptualising the Academic Self: Beyond Traditional Practices

Edited by Victoria I. Ekpo and David Allan

Thriving as a Neurodivergent Academic: Personal and Professional Journeys

Edited by Sarah Timperley, Jessica Riordan, and Matthew Harrison

ABOUT THE EDITORS

Richard Fay is a Reader in Education (TESOL and Intercultural Education) at The University of Manchester (UK), where he received his PhD in Education (2004). He specialises in: language teacher education, intercultural communication/education, researcher education and ethnomusicology. He has coordinated the Lantern research group for the last 20 years.

Achilleas Kostoulas is an applied linguist at the University of Thessaly (Greece). He has published several monographs and edited collections about language education, including *The Intentional Dynamics of TESOL* (2021, De Gruyter; with Juup Stelma) and *Challenging Boundaries in Language Education* (2019, Springer).

This page intentionally left blank

ABOUT THE CONTRIBUTORS

Jane Andrews is a Professor of Education at the University of the West of England (UK) and received her PhD in Education (2005) from The University of Manchester (UK). She jointly leads UWE's EdD programme. She specialises in multilingualism and learning including children's experiences of being multilingual and the languaging of research.

Edd Aspbury-Miyanishi, after teaching English for 14 years, returned to university for an MA TESOL followed by a PhD in Education (2023) at The University of Manchester (UK). He is now a Teaching Fellow in TESOL at the University of Leeds (UK). He specialises in the acquisition and development of expertise in teaching.

Mira Bekar is an Associate Professor of Applied Linguistics at Ss. Cyril and Methodius University (R. N. Macedonia) and obtained her PhD (2015) at the Purdue University (USA). She specialises in qualitative research methods, academic L1/L2 writing, online communication and (critical) discourse analysis. She publishes in Macedonian and English.

Jessica Bradley is a Senior Lecturer in Literacies and Language in the School of Education at the University of Sheffield. A linguist by training, her research explores linguistic landscapes in collaboration with creative practitioners, as well as

everydayness and belonging through the arts, with a particular interest in multilingualism. Her publications include the co-edited book, *Translanguaging as Transformation: The Collaborative Construction of New Linguistic Realities* (2020, Multilingual Matters).

Paul Breen is a Senior EAP Digital Learning Developer in the Academic Communication Centre at University College, London (UK) and gained his PhD in Education (2014) from The University of Manchester (UK) focusing on EAP, Educational Technology and Teacher Development. He also writes regularly about current affairs and issues relating to Social Justice.

Duygu Candarli is currently a Lecturer in TESOL at the University of Southampton (UK) and gained her PhD in Education from The University of Manchester (UK). She specialises in: second language writing, writing assessment, corpus linguistics and academic discourse. She co-authored *The Linguistic Challenge of the Transition to Secondary School* (2023, Routledge).

Magdalena De Stefani holds a PhD in Education (2012) from The University of Manchester (UK) and is an English teacher and the head of a school in Uruguay. Her research interests include teacher development, action research and narrative approaches, as well as the role of leadership practices in school effectiveness.

Siti Masrifatul Fitriyah is a Senior Lecturer in Education at the Faculty of Education, University of Jember (Indonesia), and obtained her PhD in Education (2017) from The University of Manchester (UK). Her research interests include: language policy and planning, teacher education, bilingual education, narrative inquiry and researching multilingually.

Rui He is a Lecturer in International Education at The University of Manchester (UK) and gained her PhD (2021) from the University of Glasgow (UK). Working as a cross-cultural psychologist, she specialises on international students' acculturation and (im)mobility; mental health and well-being; study abroad programmes; language, culture and identity; and creative research methods.

Zhuo Min Huang is a Senior Lecturer in Intercultural Education at The University of Manchester (UK) where she received her PhD in Education (2019). Her research interests involve: intercultural education, intercultural ethics, epistemic injustice, intercultural mindfulness, intercultural personhood and creative methods.

Eljee Javier is a Senior Lecturer and the Head of English Language at the University of Sussex (UK) and holds an MA in TESOL, an MSc in Educational Research and a PhD in Education (all from The University of Manchester, UK). She specialises in: raciolinguistics, language teacher identities and narrative-based research approaches.

Felix Kwihangana is a Senior Lecturer in Transnational Education at King's College London. He obtained his PhD in Education (2021) and an MA TESOL (Educational Technology), both from The University of Manchester (UK). His research and scholarship focus on teacher education, education policy and digital education in challenging contexts.

Magdalena Rostron is a Visiting Assistant Professor at Georgetown University in Qatar and obtained her PhD in Education (2019) from The University of Manchester (UK). She has interests in: writing and literature; education, culture and politics; exile; and the concept of the Other. She currently researches the impact of architecture on Qatari society.

Paul Vincent Smith is a Lecturer in Education at The University of Manchester (UK) where he gained his PhD in Education (2013). His research interests are in academic writing, higher education policy and practice and theories of learning. He identifies as a sociologist and prefers ethnographic methodologies, as inspired by Garfinkel, Wittgenstein and Dewey.

Sutrathorn Tantiranat (Khwan) is the English for Communication Graduate Program Chair, Burapha University (Thailand). She received her PhD in Education (2017) from The University of Manchester (UK). Her research focuses on intercultural aspects of the English Language, English as a Lingua Franca (ELF) and appropriate paradigms for teaching English in Thailand.

Dylan Williams is a Lecturer at Queen Mary University of London (UK) and gained his PhD in Education (2020) from The University of Manchester (UK). With a focus on multilingualism and language education, his research uses critical sociological perspectives to explore the interplay between agency and structure of language use in education.

DOCTORAL STUDY AND GETTING PUBLISHED: NARRATIVE AND ECOLOGICAL PERSPECTIVES

RICHARD FAY^a AND ACHILLEAS KOSTOULAS^b

^aThe University of Manchester, UK

^bUniversity of Thessaly, Greece

For early career researchers (ECRs) to thrive in academia, the challenge of publishing begins during their doctoral studies. Publishing during and from a doctorate can be seen ([Håkansson Lindqvist, 2018](#)) as part of the rite of passage, and as a liminal stage in the researcher's development from doctoral student to ECR. It is a process of academic becoming, one which ECRs face both on their own (perhaps fighting with imposter syndrome) and also with others (perhaps with their mentors and alongside their fellow ECRs). Challenging, often frustrating, but potentially also deeply rewarding, this stage in their academic trajectory brings with it expectations (both their own and those of potential employers for example) and benefits (such as increased employability). It is a process for which many may feel under-prepared, a situation this volume seeks to address by bringing together the experiences and wisdom of 'old hands' from one research network. What were the publishing successes and failures of these ECRs? And the challenges they faced and

the rewards gained? And their doubts and insights? What can be learnt from those who have gone before?

This book has a strongly narrative dimension. It curates the stories of a group of ECRs as they, in their own voices, reflect on the experience of trying to be published. There are two main reasons for the book's narrative foregrounding. First, 'the narrative mode of discourse is omnipresent in human affairs' (Nash, 1990, p. xi), and 'we spend our lives immersed in narratives – every day, we swim in a sea of stories and tales that we hear or read or listen to or see ...' (Berger, 1997, p. 1). ECRs are no exception. They swim in a similar sea of stories. Second, narratives are not simply omnipresent – they also have a valuable function for those telling them as well as those listening. We 'give meaning to [our] lives and relationships by storying [our] experience' (White & Epston, 1990, p. 13) since narration is 'an ongoing process of making sense of our experience' (Stephenson, 2000, p. 12). The ECRs whose stories are presented in this volume are making sense of their experiences of publishing. As we engage with their stories, we are immersed in the sea of their meaning-making and are beneficiaries of their storied insights.

RICHARD AND NARRATIVE

Thirty years ago, when I (Richard) became a Lecturer in Education, having a PhD was not required. In fact, I did not gain my doctorate for another 10 years, and my early publications were unconnected to any doctoral aspirations. So, my publishing story is not as closely entwined with doing a doctorate as it has been for the ECRs in this volume. But, as I near the end of my career, and as I have become more involved in supporting ECR colleagues, I am curious about

how they survive and thrive in an academic world in which PhDs and publications do so much to frame professional development, job security and career advancement.

My doctoral story does, however, have one important connection to this volume. During fieldwork, I became aware of the explanatory power of narratives as my colleagues made sense of their experiences in the international education project I was researching. This encouraged me to embrace the methodological potential of narration. Although the ‘narrative turn’ (Goodson & Gill, 2011) was clearly evident in the social sciences when I was completing my thesis (Fay, 2004), narrative methodology was in its infancy in my department. Since then, it has become a major strand in the work of our Lantern network (see below). It made sense to keep this narrative anchor for the publishing experiences of ECRs from this network.

The methodological embrace of the sense-making power of narration and narratives can be traced, in the English-medium literature for sure, to the latter part of the last century (Bruner, 1991, 1996; Clandinin, 2007; Clandinin & Connelly, 1991, 2000; Cortazzi, 1994; Dauite & Lightfoot, 2004; Gergen, 2001; Josselson & Lieblich, 1993; McAdams, 1993; Mishler, 1995; Mitchell, 1981; Nash, 1990; Polkinghorne, 1988; Reissman, 1993; Sarbin, 1986). At its heart lies a realisation of the research value of the seemingly universal habit that humans have of making sense of their experience through the stories they tell others about that experience. Whereas courts seek ‘the truth and nothing but the truth’ in the testimony of witnesses, ‘narrative truth’ is highly situated – stories are told:

- at particular moments in time – when they are retold later, details may and almost invariably do change;

- in specific contexts – when told in an interview, work experience details may differ from when told at home;
- for particular people – when told to researchers, details may vary from when told to colleagues; and
- for specific reasons – when told to make someone laugh, details may be different from when sharing something similar which has happened to you.

Nonetheless, there are insights to be valued in storied sense-making in the moment as articulated through narration and captured in the resulting narratives.

The researcher stories presented in this volume are situated in *time* (the authors are ECRs), in *context* (the stories have been written by members of the Lantern researcher network, as stimulated by the opportunity of this volume), in *relationship* (the stories have been commissioned by editors (well) known to the writers, and as written for an imagined readership of researchers seeking support to thrive in academic life) and in *purpose* (the authors seek to share personalised insights from their experience of publishing during and from a doctorate). This situatedness is, we argue, part of their strength – they have plausibility, they speak to other ECRs and they articulate what we might describe as narrative truth.

ACHILLEAS AND ECOLOGICAL THINKING

Many doctoral stories begin with a more or less clearly defined future possible self (Nurius, 1986) as an academic. Mine (Achilleas) is different, in that my PhD (Kostoulas, 2014) was driven more by intellectual curiosity than future career ambitions. While working on my master's dissertation, I took an interest in complex systems theory, which had just made a

tenuous foothold in applied linguistics (Larsen-Freeman & Cameron, 2008). There was still much work to be done to ‘nativise’ complexity thinking into language education, and I enjoyed the challenge, which eventually led to Kostoulas (2014, 2018), a worked example of how to use complexity thinking to describe a language school.

The school I described was one with which I was deeply familiar, and one very closely connected to my professional identity. This meant that as I strived to study its unseen dynamics, I was constantly confronted with how whatever I observed in its activity was entangled with my past actions and my developing identity. This brings up an important point that runs throughout the book: the narratives we tell, and the ways in which we narrate ourselves, all connect – sometimes in unseen ways – to the complex web that connects the context and time in which they are articulated, the relationships within which the narrative act takes place and the purposes that the narrative serves, and the storyteller is hard to extract from the story.

These are the seeds of the ecological perspective that holds this collection together: a perspective that places the individual in the centre of an ‘ecology of ideas’ (Bateson, 1972/2000) and views meaning-making activity and meaning structures in the ecology as being in constant interplay. Describing this theory briefly is a challenge for which an introductory chapter such as this is not particularly suitable (but see Stelma & Kostoulas, 2021, 2024 for more). When applied to the topic of this book, its starting premise is that all the activity that connects our early selves, as aspiring doctoral students, to our future selves as mature academics is a process of *becoming*. In addition to the acquisition of writing, research, and teaching skills, academic becoming also involves changes in our identities, cognitions, and networks. The academic becoming trajectory takes place within a dense web (or ‘ecology’) of interconnecting expectations, routinised practices, interactions, resources and more. Different configurations of the

diverse elements in an ecology will give rise to specific opportunities for action (or ‘affordances’), some arising spontaneously and others being produced by our action. For instance, the availability of funds, a supportive mentor, and institutional pressure to increase research output can come together to produce an affordance for writing an article. In this sense, academic becoming emerges from the environment. But at the same time, the emergent activity reshapes the meaning structures around it. For example, dealing with reviewers and editors becomes easier once one has published several articles. Academic becoming, then, is this reciprocal relationship between meaning structures that generate activity and meaning-generating activity, which preserves our identity as agentic beings.

LANTERN

We can think of academic becoming as being situated in an abstract ‘ecology of ideas’ (Stelma & Kostoulas, 2021). For many doctoral students and ECRs, this ecology can also take a more concrete form, as they might belong to, identify with and participate in one or more researcher networks, which may have institutional, disciplinary, professional, geographic or other anchors or be more distributed. As academic life ebbs and flows, network membership can be quite fluid, and periods of intense network activity may be followed by quieter ones. And as researchers’ doctoral studies progress, their participation may peak and then fall away. Nonetheless, such networks, like supervisory relationships, can be powerful shaping influences on researchers and helping them to thrive, not just survive, in academic life. They may shape their experience of publishing and much else besides.

The researchers in this volume have some connection with one such network. Its name, Lantern – LANguage Teacher Education Researcher Network – is more of an indication of its origins than it is a statement of a tightly delineated research area. In some cases, the contributors' association with Lantern has been substantial and long-lasting, in others briefer and more tangential. Nonetheless, Lantern acts as an anchor for the volume, providing a contextual coherence to an otherwise diverse set of researcher narratives. It has its particularities but, in some ways, it stands for all such networks.

OVERVIEW OF THE VOLUME

This volume consists of 15 narratives, which present diverse aspects of academic writing and publishing and academic professional development. These are organised in five thematically linked parts, as well as theoretical contributions that introduce and conclude the volume. Each narrative begins with a short contextualising section, by the editors. Other than that, we have encouraged and respected the various ways in which authors narrate their experiences, resulting in a polyphonic exploration of early researcherhood. Each section concludes with a brief ecologically-framed commentary, which attempts to tease out commonalities and salient themes in the narratives.

The first substantive contribution in the volume is an overview (by Jane Andrews) of the influences that shape the academic publishing trajectories of ECRs. Her chapter surveys the literature on early career publishing and discusses the pressures to publish and the challenges ECRs face as well as good practices that may support them in their endeavours.

Part A of the book focuses on the process of academic becoming. The two narratives, by Magdalena De Stefani and

Eljee Javier, showcase how academic becoming involves (re-) constructing one's identity. For Magdalena this process involved accepting the entanglement of her professional and academic identities, and building on this hybrid identity as she worked with teachers in her professional setting and published in (and with) the academic community. Eljee's narrative explores the complexities of being a native-speaker of English and also a member of a visible ethnic minority. It alerts us to the fact that academic becoming may involve reconciling conflicting perceived identities.

The narratives that make up Part B bring to the fore diverse ways in which ECRs experience writing for publication. The first narrative, by Jessica Bradley, provides insight into how public and private writing helped her to develop her 'writerly identity'. Next, Edd Aspbury-Miyanishi tells the story of how his PhD by publication organically grew in ways that had little resemblance to his original research plan. Magdalena Rostron concludes this part with advice from her writing and teaching experience. Together, they illustrate how the writing process emerges from shaping influences in the environment.

Part C extends this discussion, by looking into the collaborative aspects of academic publishing. In Siti M. Fitriyah's narrative, we follow the publication of a collaboratively written article and gain insight into team dynamics involving seniority, gender, and 'newcomer' status. The following narrative, by Dylan Williams, tells the story of a series of publications that began before his PhD studies and traces the influences from colleagues that shaped his publication trajectory. In the final narrative of the section, Sutraphorn ('Khwan') Tantiniranat tells the story of how her academic network provided support as she experienced the ups and downs of academic publishing. In doing so, these three narratives provide us with examples of how the processes of
