About the Editors	ix
About the Contributors	xi
Preface	xxi
<b>Chapter 1 Deriving Big Insights from Big Data: The Next Era-in Data-driven Management</b> <i>Ipseeta Satpathy, Arpita Nayak and Vishal Jain</i>	1
<b>Chapter 2 Ethical AI in HR: Navigating the Data-driven Frontier</b> <i>A.R. Deepti, B. Manimekala, Farzeen Basith, Vivek K. and Vijayanandh Rajamanickam</i>	19
<b>Chapter 3 Mastering the Integration Landscape: The Interplay Between Data-driven Management and TechStrat Fusion</b> <i>R. Bargavi and Vasumathi Palaniswamy</i>	37
<b>Chapter 4 Leadership and Decision-making: Strategic Guidance for Leveraging Data-driven Insights</b> <i>Vaishnavi Vadivelu, Prakash Nachimuthu, Parthasarathy Karthikeyan and Sukirno D.S.</i>	63
<b>Chapter 5 Data Governance Approach to Integrate Techstrat Fusion for Enterprise Growth</b> <i>Sonali Srivastava, Manisha Singh and Varsha Rokade</i>	91
<b>Chapter 6 Revolutionising Services Through Data-driven Management and Tech-Start Fusion</b> <i>Manoj Kumar Agarwal, Nazia Hasan, Ambuj Kumar Agarwal, Neema Gupta and Danish Ather</i>	107

<b>Chapter 7 Agile Methodologies in Technology Strategy Fusion Implementation</b> <i>Somesh Kumar Sahu, Senthilkumar Ranganathan and Debabrata Samanta</i>	127
<b>Chapter 8 Embracing the Future: Revolutionising Customer Service Experience Through Data-driven Management</b> <i>Aparna Vats</i>	149
<b>Chapter 9 Transforming Business Operations with Data-driven Management in the TechStrat World</b> <i>Tanya Kumar, Rachit Agarwal and Shweta Bijwe</i>	169
<b>Chapter 10 Management: Revolutionising Services Through Data-driven Management and Tech-Strat Fusion</b> <i>Kushtrim Gashi, Festim Tafolli and Luan Vardari</i>	185
<b>Chapter 11 Cloud Computing Application for Data Management of E-government in Public Sector Services of Special Region of Yogyakarta</b> <i>Muhammad Younus, Achmad Nurmandi, Dyah Mutiarin, Andi Luhur Prianto, Halimah Abdul Manaf, Sataporn Roengtam, Zuly Qodir, Imron Sohsan, Umar Congge, Idil Akbar and Bambang Irawan</i>	209
<b>Chapter 12 Implementing Effective Strategies for Data Privacy and Security in Techstrat Fusion</b> <i>Rajan Goyal, Tanya Kumar, Gaurav Gupta and Rachit Agarwal</i>	237
<b>Chapter 13 The Double-edged Sword of Artificial Intelligence: Exploring Job Insecurity and Turnover Intention in the Modern Workplace</b> <i>Shikha Saloni, Neema Gupta, Ambuj Kumar Agarwal and Ripon Roy</i>	255
<b>Chapter 14 Innovation Culture: Fostering Creativity in the TechStrat Fusion Era</b> <i>Sruthi Pillai, R. Ramakrishnan</i>	271
<b>Chapter 15 Ethical Integration of AI in HRM in IT Companies: Exploring Variables Through ISM and MICMAC Analysis</b> <i>Sushma Sharma, Monika Agarwal and Anju Rohilla</i>	295

## About the Editors

**Vishal Jain** is presently working as a Professor (CSE) at the Department of Computer Science & Engineering, School of Engineering & Technology, Vivekananda Institute of Professional Studies – Technical Campus, New Delhi. Before that, he worked as Professor at Sharda University, Greater Noida and Associate Professor at Bharati Vidyapeeth's Institute of Computer Applications and Management (BVICAM), New Delhi. He has associated as a member of the Faculty Board, Board of Planning and Management, Executive Council, Academic Council, Curriculum Development and Review Committee and Academic Audit of various higher education Institutions. He is associated with Kuala Lumpur University of Science and Technology (KLUST) (formerly known as Infrastructure University Kuala Lumpur (IUKL)), Malaysia, Lincoln University College, Malaysia and Research Institute of IoT Cybersecurity, Department of Electronic Engineering, National Kaohsiung University of Science and Technology, Taiwan for research oriented activities. He has supervised three Ph.D and two scholars are pursuing. He has more than 3300 research citations with Google Scholar (h-index score 30 and i-10 index 66) and has authored more than 250 research papers in professional journals and conferences. He has authored and edited more than 70 books (most of them are indexed at the Scopus) with various reputed publishers, including Elsevier, Springer, IET, Apple Academic Press, CRC, Taylor and Francis Group, Scrivener, Wiley, Emerald, NOVA Science, River Publishers, IGI-Global and Bentham Science. He has more than 300 Scopus publications. He is the book series editor of 10 book series with the reputed international publishers. Along with the regular teaching, he had organized various Conferences, Faculty Development Programme, Seminars, Hackathon, Faculty and Students Oriented activities. His research areas include machine learning, information retrieval, semantic web, ontology engineering, data mining, ad hoc networks, sensor networks and network security. He received a Young Active Member Award for the year 2012–13 from the Computer Society of India, and Best Faculty Award for the year 2017 and Best Researcher Award for the year 2019 from BVICAM, New Delhi.

**Neema Gupta** is an Associate Professor in the Management Department of University School of Business, Chandigarh University, Mohali, Punjab, India. She has a teaching experience of over 17 years and her area of specialisation is human resource management, workplace spirituality, ethical leadership, etc. Her papers have been published in a wide array of reputed journals.

**Ambuj Kumar Agarwal** secured his PhD degree in the field of Computer Science & Engineering. He is having 20 years of experience in Academic, Research, Administration, and Industries. He is currently working as a Professor in the Department of Computer Science and Engineering, School of Engineering and Technology, Sharda University, Greater Noida, India. His research area includes Software Engineering, Cloud Computing, Software Testing, and Information Hiding. He has served as a Chair Person and Technical Committee Member for various international conferences. He has authored more than 150 papers in the journals, conferences, and book chapters related to his research. He has published more than 10 Australian and Indian patents.

**Girija Chetty** has a Bachelor's and Master's degree in Electrical Engineering and Computer Science from India and PhD in Information Sciences and Engineering from Australia. She has more than 35 years of experience in Industry, Research, and Teaching from Universities and Research and Development Organisations. Currently, she is a Full Professor in Computing and Information Technology at School of Information Technology and Systems, University of Canberra, Australia, and leads a research group with several PhD students, Post Docs, research assistants, and regular international and national visiting researchers. She is a Senior Member of IEEE, USA, and Senior Member of Australian Computer Society, and ACM member, and her research interests are in the area of multi-modal systems, computer vision, pattern recognition, data mining, and medical image computing. She has published extensively with more than 200 fully refereed publications in several invited book chapters, edited books, conferences, and journals.

**Ramani Kannan** is working as Associate Professor, Center for Smart Grid Energy Research, Institute of Autonomous system, University Teknologi PETRONAS (UTP), Malaysia. He completed PhD (Power Electronics and Drives) from Anna University, India, in 2012, ME (Power Electronics and Drives) from Anna University, India, in 2006, and BE (Electronics and Communication) from Bharathiyar University, India, in 2004. He has more than 15 years of experience in prestigious educational institutes. He has published more than 130 papers in various reputed national and international journals and conferences. He is the Editor, Co-editor, Guest editor, and Reviewer of various books including Springer Nature, Elsevier, etc. He has received award for best presenter in CENCON 2019, IEEE Conference on Energy Conversion (CENCON 2019) Indonesia.

## About the Contributors

**Monika Agarwal** is an Associate Professor in the PGDM Department, Jagann Institute of Management Studies, Rohini, India. She has done PhD in Management from Maharshi Dayanand University, Rohtak. She has 13+ years of Experience in Corporate and Teaching. She is an Avid Researcher and has published numerous research papers in the journal of repute such as *Psychology, Health & Medicine, Journal of Management History, Journal of Enterprising Communities: People and Places in the Global Economy*, etc.

**Manoj Kumar Agarwal** working as Professor in Teerthanker Mahaveer University, Moradabad. He is an accomplished Academician with expertise in primary research/teaching areas, for example statistics and finance. With over 18 years of experience in teaching and research, he has contributed significantly to advancing knowledge in fintech. He has a proven track record in guiding graduate students, publishing in high-impact journals indexed in Scopus and web of science, and presenting research papers at various international conferences. He is serving organisation as Head of the Department for management. He is also an Active Member of College Research Committee and is a Guide to research candidates pursuing research in the field of management.

**Rachit Agarwal** is working as an Assistant Professor at University School of Business, Chandigarh University, Mohali. He is having more than 7 years of work experience in teaching and research. His areas of interest are fintech, artificial intelligence, financial analysis, investment behaviour analysis, and behavioural study. He has published various papers in national and international journals including Scopus and ABDC-listed journals. He has also organised many workshops and Faculty Development Programme on Research Methodology and on different statistical tools.

**Idil Akbar** is Senior Professor in the Universitas Padjadjaran, Indonesia.

**Danish Ather** is a distinguished Academic and Research Leader with over 19 years of experience in teaching, research, and administration. Currently serving as a Professor and Head of the Department of Research, he specialises in Artificial Intelligence, Machine Learning, IoT, Python Programming, and Cloud Computing. A Senior IEEE Member and an Active Contributor to the AI Council of Uzbekistan's Ministry of Higher Education, he has authored 70+ research

papers, including 60 indexed in Scopus, and holds multiple international patents in AI and IoT. He has been honoured with numerous prestigious awards, including ‘Scientific Leader of the Year (2024)’ and ‘Outstanding Performer in STEM’. He has played a pivotal role in organising international IEEE conferences and skill development programmes, bridging academia and industry to drive technological advancements.

**R. Bargavi** is a Researcher in the field of edtech and Industry 5.0. She has published her works in reputed Scopus-indexed journals and book chapters and presented research papers at renowned institutions’ conferences.

**Farzeen Basith** is a highly accomplished computer science educator, known for her extensive experience and dedication in teaching Master of. Her dedication to academic excellence is further enhanced by her substantial contributions to technological innovation and research. In 2024, she achieved a notable milestone by securing a design patent for Smart Sandals, demonstrating their expertise in practical applications of technology. Her scholarly work extends to authoring a comprehensive book chapter titled ‘Cognitive IoT Unveiled: Safeguarding the Future Through AI ML Security And Ethics’, published by IGI Global, which explores the critical intersection of Internet of Things, artificial intelligence, and ethical considerations in modern computing. Her research prowess is further evidenced by their IEEE-published paper ‘Forecasting the Consumer Price Index using SARIMAX Modeling’ (2024), which showcases their expertise in advanced statistical modelling and economic data analysis. This work demonstrates their ability to apply complex computational methods to real-world economic challenges. With a strong foundation in both teaching and research, they bring a wealth of knowledge to the academic community, particularly in areas of IoT, AI, machine learning, and data analytics. Their work continues to influence both students and the broader field of computer science.

**Shweta Bijwe** is a Business Analytics Professional with over 5 years of experience in analytics roles across IT services and product sectors. She specialises in enhancing management-level decision-making and driving organisational profitability through strategic problem-solving and business intelligence analysis. Her career includes key positions such as Manager – Data Analyst at State Bank of India, Assistant Manager – Business Analyst at Ola Financial Services, and Business Analyst at Larsen & Toubro Infotech. She holds a PhD in Application of Business Analytics in Marketing Management, an MBA in Operations Management, and a Bachelor’s of Engineering in Information Technology. She is dedicated to delivering impactful results in analytics-driven environments.

**Umar Congge** is Senior Professor in the Department of Government Studies, Universitas Muhammadiyah Sinjai, Sinjai, Indonesia.

**A.R. Deepti** is working as a Professor in the Department of MCA, Acharya Institute of Graduate Studies, Bengaluru, India. She has published research articles

in national and international journals and conferences, reviewer for IGI Global, etc. Her areas of interest include Cryptography, Security, Machine Learning, and Data Analytics.

**Kushtrim Gashi** is the Vice Dean and Assistant Professor at the Faculty of Economics, University 'Ukshin Hoti' Prizren. He earned his PhD from SMC University, Switzerland, specialising in management. He teaches courses such as Managerial Economics, Quality Management, Negotiation and Leadership Skills, and E-Business. He mentors Bachelor's and Master's students, guiding them through research in business and management. His professional experience includes roles as a credit analyst and managerial positions in diverse organisations. As a Member of the Central Quality Assurance Committee and Faculty Council, he contributes to institutional governance. His research focusses on management, technology, and data governance, with publications in international book chapters and peer-reviewed journals. His work addresses artificial intelligence, risk management, and sustainable business practices, showcasing his dedication to advancing both academia and the business community.

**Rajan Goyal** is working as Assistant Professor at University School of Business, Chandigarh University, Gharuan, Mohali, India. He has completed his PhD from Punjabi University, Patiala, and has Qualified UGC-NET. With more than 4 years of Teaching Experience, he also has more than 15 Research Papers in Scopus, ABDC, UGC CARE, peer-reviewed journals. He is also working as 'Joint Secretary' of Punjab Commerce & Management Association (Regd.) since 2021. He has attended/participated various national/international conferences/seminars/workshops/webinars, etc. His main research areas include Consumer Buying Behaviour, Social Media Marketing, and Human Resource Management.

**Gaurav Gupta**, working as Assistant Professor, is Master of Commerce and PhD from Punjabi University, Patiala, and Qualified UGC-NET. He has more than 10 years of Teaching Experience. He has Nine Research Papers to his name. He is working as 'Joint Secretary' of Punjab Commerce & Management Association (Regd.) since 2021. He has attended/participated/organised various national/international conferences/seminars/workshops/webinars, etc. He has also acted as Resource Person in various international and national conferences. His main research areas include Human Resource Management, Organisational Citizenship Behaviour, Organisational Behaviour, and Marketing Management.

**Nazia Hasan** is working as an Assistant Professor in Teerthanker Mahaveer University, Moradabad. With over 15 years of teaching experience in areas of accounts and finance, she has done significant research in areas of microfinance services, fintech, and entrepreneurship. She has contributed significantly in the field of teaching and research. She has published extensively in high-impact journals indexed in Scopus and web of science and has presented research papers at various international conferences. She is actively involved in reviewing research

papers for various journals. She is also well versed with various quantitative as well as qualitative research tools.

**Bambang Irawan** is Senior Professor in the Department of Public Administration, Universitas Mulawarman.

**Parthasarathy Karthikeyan**, Head of the Department of Management Studies at Kongu Engineering College, holds a PhD in Management from Bharathiyar University and has over 22 years of experience. An accomplished Researcher and Educator, he has guided 17 PhD scholars, published over 200 articles, authored 13 books, and delivered 150+ guest lectures. He has organised multiple conferences, securing Rs. 62 lakhs in grants, and contributed extensively to national and international seminars. Recognised with numerous awards, he is a SEBI-certified resource person, NSDC assessment officer, and serves on editorial boards and various institutional committees.

**Tanya Kumar** works at Amity University, Mohali. She has experience in teaching and research. She has completed PhD in commerce from MAU, Baddi. Her areas of interest are blockchain, cybersecurity, and investment behaviour analysis. She has published various papers and book chapters in national and international, including Scopus and ABDC-listed journals and edited books.

**Halimah Abdul Manaf** is Senior Professor in the UUM College of Law, Government, and International Studies Universiti Utara Malaysia, Kedah, Malaysia.

**B. Manimekala** is working as an Assistant Professor in the Department of Computer Science, Christ University, Bengaluru, India. She has 17 years of teaching experience. She has published research articles in national and international journals. She has also presented 18 papers in national and international conferences. She has authored in one book, three book chapters and she owned two patents. Her areas of interest are IoT, networking, machine learning, and AI.

**Dyah Mutiarin** is Senior Professor in the Department of Government Affairs and Administration, Universitas Muhammadiyah Yogyakarta, Yogyakarta, Indonesia.

**Prakash Nachimuthu**, Senior Grade Assistant Professor in Management Studies at Kongu Engineering College, specialises in retail service quality and customer loyalty research. He has led ICSSR-funded Blockchain projects in South Indian agricultural supply chains and published in Scopus and UGC CARE-listed journals on smart cities and service quality. He has authored texts on SAARC relations and India's financial landscape; organised seminars on Industry 4.0, human rights, and mental health; and conducted workshops on skill development and research methods. He frequently lectures on statistical tools and advanced research practices, reflecting his dedication to the business and social sciences.

**Arpita Nayak** is currently serving as an Assistant Professor, offering courses in management. She completed her PhD in Management from the KIIT School of Management. Her MBA and strong interest in Human Resource Management (HRM) led her to pursue further studies in HRM. Her passion for talent management inspired her doctoral research on 'A Comparative Study on Talent Management in Private and Public Manufacturing Industries in Odisha'. She has presented research papers at both national and international conferences and has published articles in Scopus-listed journals. Over the years, she has taught a variety of subjects, including Human Resource Management, Principles of Management, Business Studies Management, Tribal Entrepreneurship, and Organisational Behaviour. In addition to her academic career, she also has several years of corporate work experience.

**Achmad Nurmandi** is Senior Professor in the Department of Government Affairs and Administration, Universitas Muhammadiyah Yogyakarta, Yogyakarta, Indonesia.

**Vasumathi Palaniswamy** is an Assistant Professor in General Management with over 14 years of academic experience and a specialisation in marketing research, entrepreneurship, and business economics. In addition to her academic role, she is the Co-chair of the Centre for Ethics and Corporate Governance and the coordinator of the Sustainability Club. She, with a background in agriculture and an MBA, brings a unique interdisciplinary approach to her role. She has also led research projects funded by national grants and presented at numerous academic conferences.

**Sruthi Pillai**, PhD in Green Marketing, is a Passionate Teacher and Learner and is working as Adjunct faculty at Texila American University, Coimbatore. She has published 15 papers in various national and international journals. Her area of interest is Marketing, HR, and General Management.

**Andi Luhur Prianto** is Senior Professor in the Department of Government Studies, Universitas Muhammadiyah Makassar, Makassar, Indonesia.

**Zuly Qodir** is Senior Professor in the Department of Government Affairs and Administration, Universitas Muhammadiyah Yogyakarta, Yogyakarta, Indonesia.

**Vijayanandh Rajamanickam**, serving as a Lecturer at the University of the West Indies, St. Augustine Campus in Trinidad and Tobago, brings 24 years of academic experience, including 15 years in research. He completed his BSc in Mathematics from St. Joseph's College, Tiruchirappalli (1997), followed by MCA and MPhil in Computer Science from Bharathidasan University (2000, 2005), and PhD in Computer Science from Bharathiyar University (2014). With numerous publications in international journals and conferences, his research focusses on Image Segmentation, Computer Vision, and Vision-based Computer Interaction.

**R. Ramakrishnan**, PhD in Stakeholder Management, is a Diplomat turned passionate research-oriented teacher with wide and varied experience in Indian Government/private enterprise. He has been associated with founding four B schools and is currently Chief Consultant, Vivin Consultants, Chennai. He is the author of six books ranging from TQM to Environmental Science to Ethics, and he has written close to 100 papers.

**Senthilkumar Ranganathan**, a distinguished Professor at the School of Management, Presidency University, Bangalore, has 27 years of teaching experience, one year in industry, and over five years in research. A gold medallist and university rank holder in Electronics, he also holds postgraduate degrees in Business Administration and Human Resource Management, securing first rank, along with an MPhil in Management, a PG Diploma in Computer Applications, and a PhD in Talent Management. With over 60 research publications in reputed journals, he has presented at national and international conferences. He has authored books on business statistics, analytics, and MIS, published by Cengage International. As an expert in data analytics, he is proficient in SPSS, R, Python, and Tableau. He has conducted corporate training for Accenture, Siemens, and ICICI Bank. A PhD guide, he has mentored 12 scholars and delivered over 500 hours of training.

**Sataporn Roengtam** is Senior Professor in the Faculty of Law, Khon Kaen University, Khon Kaen City, Thailand.

**Anju Rohilla** is an Assistant Professor at Faculty of Management and Commerce, SRM University, Delhi-NCR. She has 6 years of teaching experience. She has done a PhD (Management) from Bhagat Phool Singh Mahila Vishwavidyala, Khanpur Kalan, Sonipat. She has done MBA from Guru Jambheshwar University of Science and Technology in Hisar and MCom from DDE, Maharishi Dayanand University, Rohtak. Additionally, she has done a 3 years certified software engineering programme GNIIT from NIIT. Her area of interest is on banking fraud. She has delivered 15 research presentations at the national conference and published several research papers in national and international journals. She has delivered the workshops on case study analysis.

**Varsha Rokade** is an Associate Professor at the Department of Management Studies, MANIT, Bhopal. With 17 years of academic and research experience, she holds an MBA and a PhD and has qualified for UGC-NET. Her areas of expertise include Human Resource Management, Marketing Management, and General Management. She has an impressive academic output, with 72 published papers, including 35 in international journals, 14 presented at national conferences, and 23 at international conferences. She has also published 2 books. She is actively involved in professional bodies like the Indian Society of Technical Education and the All-India Management Association. Her ongoing research focusses on the psychological benefits of the Pradhan Mantri Gram Sadak Yojna for rural women in India, funded by NRIDA. She has also completed a

socio-economic assessment of a public–private partnership road project, sponsored by Lotus White Concept Realisation, New Delhi.

**Ripon Roy** is working as a Lecturer in University of Chinese Academy of Science in Beijing.

**Somesh Kumar Sahu** is a Research Scholar in Operations Management with over 23 years of expertise in product engineering, Agile management, and data science. As an Associate Director at LTIMindtree Pvt Ltd, a global technology consulting firm, he leads a business unit specialising in innovative product development and optimising the data-to-decisions lifecycle. He holds multiple certifications, including CSP-SM, CSPO, and SAFe Agilist and is well-versed in Agile methodologies such as Scrum, Kanban, Lean, sprint planning, backlog grooming, and estimation techniques. With master's degrees in Computers, Product Management, and Business Analytics, he has conducted over 300 hours of Agile and project management training, impacting more than 1,000 professionals. Beyond industry leadership, he has published over nine research papers and book chapters in esteemed journals like IGI Global, IEEE, and Scopus. He actively contributes to academia, reviewing publications for IGI Global and advancing research in Agile practices, Knowledge Graphs, and mobile networks.

**Shikha Saloni** is a Research Scholar at Chandigarh University. Her area of research is Workplace incivility, Turnover Intentions, and Employee wellbeing.

**Debabrata Samanta** is the Programme Head and Assistant Professor in the Department of Computing and Information Technologies at the Rochester Institute of Technology, Kosovo, Europe. He holds a PhD in Computer Science and Engineering from the National Institute of Technology, Durgapur, specialising in SAR Image Processing. His research spans SAR Image Analysis, Video Surveillance, Heuristic Algorithms, Deep Learning, Blockchain, Statistical Modeling, Wireless Adhoc Networks, and NLP. With six consultancy projects completed and four PhD scholars guided, he has secured significant funding, including \$8,110 under the Open Access Publication Fund. Holding 22 patents across India and Australia, he has published over 247 research papers in IEEE, Springer, and Elsevier. A prolific author, he has co-authored 13 books, co-edited 12, and contributed to 8 book chapters. A Senior IEEE Member and active global speaker, he serves as an Editor and Technical Committee Member for international conferences.

**Ipseeta Satpathy**, a 22-year-old professor at KIIT University, has authored six textbooks and published over 250 research papers in various national and international journals. She has also attended and presented at international conferences, including the International Conference on HRM & PD in the Digital Age in Singapore and Cambridge Business & Economics Conference in the UK. Some of her research papers have won Best Paper Awards. She is currently guiding

several research scholars for a PhD degree, with 24 of her scholars awarded a degree by KIIT Deemed to be University. She has also conducted management development programmes and was awarded the Oxford Journal Distinguished Research Professor Award 2014 at Cambridge University. She has also been invited to address faculties and students at Charlton Business School and Southampton University. She was felicitated with the Times Power Women 2023 by the Times of India Group.

**Sushma Sharma** is an Associate Professor and Programme Coordinator (Master of Business Administration) at SRM University, Delhi-NCR, Sonapat. She holds a PhD in Management from Maharshi Dayanand University, Rohtak, and has more than 17 years of experience, including corporate. She has contributed significantly to academia with more than 25 research papers published in various prestigious international and national journals, and beyond academic publication, she has participated in over 30 conferences and 20 FDP. Noteworthy among her contributions, 'Innovation in the University 4.0 System based on Smart Technologies', published in Routledge, Taylor & Francis Group, USA.

**Manisha Singh**, Assistant Professor at VIT Bhopal University's Business School, holds a Doctorate in Management from Maulana Azad National Institute of Technology, Bhopal, specialising in Human Resource Management. With 18 years of combined experience in industry and academia, her research focusses on the impact of Employer Brand on Employee Retention. She has numerous publications in esteemed international and national journals, along with contributions to book chapters with reputable publishers & in Scopus. Her research areas span Organisational Behaviour, Human Resource Management, and Finance. She has presented research papers in various international and national conferences, seminars, and has organised several short-term courses. Additionally, she serves as an external paper setter in multiple universities and holds design patents with grants from the Department for Promotion of Industry and Internal Trade, Government of India. She is actively involved as a Reviewer of board of several journals.

**Imron Sohsan** is Senior Professor in the Faculty of Humanities and Social Science Khon Kaen University Khon Kaen City, Thailand.

**Sonali Srivastava** is presently working as an Assistant Professor (Senior Grade) at Jaypee Business School, JIIT, Noida. She has a doctorate in Finance from Dayalbagh Educational Institute, Agra. She has an academic experience of more than 8 years with several reputed institutions, that is Symbiosis Centre for Management Studies, (SCMS) Nagpur, VIT Bhopal University, MNNIT Allahabad, IIM Ahmedabad, Ministry of Finance, and Amity University. She has published a number of research papers in peer-reviewed international and national journals indexed in Scopus and WOS. She has also presented research papers in international and national conferences, seminars, and conventions. She has organised a number of conferences and short-term courses. She has authored books titled

'Advanced Auditing and Recent Advances in Accounting, Taxation & Auditing'. She is a Member of various professional bodies and Member of the Reviewer Board of Various Journals.

**Sukirno D.S.** is a Professor in Managerial Accounting at the Faculty of Economics and Business, Yogyakarta State University, Indonesia. With extensive experience in teaching and research, he has published numerous articles in reputable journals and actively participates in national and international seminars. His research interests include corporate governance, financial reporting, and performance measurement. He is also a Seasoned Mentor to many graduate students and serves on several editorial boards and academic committees. Additionally, he has contributed to curriculum development and innovative teaching methods, aiming to enhance the academic experience for students. As a recognised expert in his field, he is dedicated to advancing managerial accounting education and research.

**Festim Tafolli** is an Assistant Professor at the Faculty of Economics of the University 'Ukshin Hoti' Prizren. He is a recognised Scientist and Lecturer in the field of marketing and international management. He holds a PhD in International Management from the University of Klagenfurt (Austria) and an MSc in Marketing and Communication and a BSc in Foreign Trade from Ca' Foscari University in Venice (Italy). Currently, he works as a Lecturer at the University 'Ukshin Hoti' Prizren, where he teaches courses such as Fundamentals of Marketing, Strategic Marketing, E-Marketing, Logistics and Distribution, International Management, and Market Research. His research interests include corporate social responsibility, corporate corruption, and consumer perception. He has published several papers in renowned journals. He also presents his research findings at international congresses and conferences, making an important contribution to the academic community.

**Vaishnavi Vadivelu** holds a PhD from Amrita School of Business, Amrita Vishwa Vidyapeetham, Coimbatore, India, and a Master's in Business Administration from Bharathiyar University. With over 8 years of academic experience, her expertise lies in Change Management and Healthcare Operations Agility, with research interests in agile systems, sustainability, and service operations. She has published 16 peer-reviewed articles and several book chapters on topics like blockchain, AI in HR, and Industry 4.0. Her ongoing research focusses on enhancing healthcare, hospitality, and tourism through agile and sustainable practices.

**Luan Vardari** is Vice-Rector for teaching, student affairs, and scientific research at the University 'Ukshin Hoti' Prizren, where he is also Assistant Professor of Finance at the Faculty of Economics. He holds a PhD in Business Administration and an MA in Finance from Trakya University, where his research focusses on the stock markets of the Balkan countries. Previously, he was Vice Dean and has built a strong academic presence, particularly in the areas of financial markets,

portfolio optimisation, and international finance. In addition to teaching at the university, he is the Founder and Editor-in-chief of the Prizren Social Science Journal, for which he has authored numerous book chapters and academic articles. His leadership and contributions reflect his commitment to promoting financial education and supporting academic excellence at his institution.

**Aparna Vats** has been serving as an Assistant Professor at Tecnia Institute of Advanced Studies for approximately two years, during which she has gained valuable experience in teaching and mentoring students in her field. Equipped with knowledge of building relationship, guiding, and suggesting ways to management students to make improvements for future.

**Vivek K.** is an experienced academician and IT professional with a strong background in the ERP domain and academics. He holds a Master's degree in Computer Applications (MCA) from MAHE, Manipal, and a Bachelor's degree in Mathematics, Physics, and Computer Science from Mangalore University. With nearly a decade of experience in the IT industry, including work at Tally Solutions Pvt. Ltd. and ProEdge Edutech Pvt. Ltd., he transitioned to academia and is currently in the MCA department at Acharya Institute of Graduate Studies, Bangalore. His research interests include AI, machine learning, and IoT, and he has published several conference papers and book chapters in these areas. In addition to his academic contributions, he holds a patent for a sensory-based innovation designed to assist the visually impaired. He is also actively involved in educational initiatives and has been a key organiser for national seminars and student programmes. He continues to contribute to both industry and academia, with a focus on emerging technologies and their applications.

**Muhammad Younus** is PhD student in the Department of Government Affairs and Administration, Universitas Muhammadiyah Yogyakarta, Yogyakarta, Indonesia.

# Preface

'Innovate to Integrate: Data-Driven Management and TechStrat Fusion Unveiled' is a groundbreaking technical guide that navigates the convergence of data-driven management principles with the innovative TechStrat Fusion framework. Comprising cutting-edge insights, this book serves as a comprehensive resource for professionals, decision-makers, and researchers at the intersection of management and technology. The technical underpinnings are meticulously crafted to provide a nuanced understanding of data-driven decision-making and the strategic integration of technology within organisational frameworks.

The book begins with a detailed exploration of the core tenets of data-driven management, laying a robust foundation for readers to comprehend the transformative power of leveraging data insights in decision-making processes. It systematically introduces the TechStrat Fusion framework, delving into its architectural components, strategic nuances, and practical applications. The technical discourse includes discussions on data analytics, machine learning, and the utilisation of emerging technologies within the TechStrat Fusion context. Practical case studies drawn from diverse industries such as healthcare, finance, manufacturing, and education are dissected from a technical standpoint, providing readers with actionable insights into implementing integrated strategies.

The technical depth extends to the ethical considerations and challenges associated with data-driven management and TechStrat Fusion. The book systematically addresses privacy concerns, biases in decision models, and the responsible use of data. Aimed at fostering a community of practitioners, the technical descriptions include guidelines for creating scalable and sustainable integration frameworks, embracing agile methodologies, and incorporating future-ready technologies. As a forward-thinking technical guide, 'Innovate to Integrate' equips professionals with the knowledge and tools necessary to navigate the intricacies of data and technology fusion, ensuring their organisations remain agile and competitive in an evolving digital landscape.

The book 'Innovate to Integrate: Data-Driven Management and TechStrat Fusion Unveiled' is essential for several reasons, addressing critical needs and challenges faced by individuals, organisations, and professionals in today's business landscape.

Firstly, the book provides a holistic understanding of how data-driven management and TechStrat Fusion can be seamlessly integrated, offering a comprehensive view that is crucial for navigating the complexities of the modern business environment. Secondly, the book equips decision-makers with the knowledge and

tools needed to make informed, strategic decisions by leveraging data-driven insights and integrating innovative technology strategies. Thirdly, it offers a road-map for organisations to gain a competitive advantage by optimising operational efficiency, fostering a culture of innovation, and staying ahead in the digital transformation race. Fourthly, it serves as a catalyst for innovation by inspiring a mindset shift towards embracing new approaches in management and technology integration, encouraging organisations to explore novel solutions to business challenges. Fifthly, it provides practical guidance, real-world examples, and case studies to help organisations overcome challenges in the integration process, facilitating a smoother and more effective implementation. Sixthly, it addresses the imperative for organisations to adapt to the digital era, helping them understand and implement data-driven practices and technology strategies that are essential for sustained success. Seventhly, it bridges the gap between traditionally separate disciplines of management and technology, encouraging cross-disciplinary collaboration and communication for more effective and innovative outcomes.

## Chapter 1

# Deriving Big Insights from Big Data: The Next Era-in Data-driven Management

### Abstract

The emergence of Big Data has revolutionised business intelligence (BI) and management, marking the onset of a fresh era defined by the ability to extract profound insights from extensive and intricate datasets. This conceptual manuscript seeks to augment the current corpus of literature by delving into the shift from Big Data to Big Insights and its consequences for data-centric management. The primary emphasis lies in comprehending how organisations can effectively employ sophisticated data analytics methodologies to transform raw data into actionable strategic insights, propelling decision-making processes and bolstering competitive advantage. This study explores the theoretical foundations of Big Data analytics and its incorporation into data management strategies. This work attempts to review developments in techniques and tools for mining high volume, complex databases for patterns, and trends useful in managerial decision-making; it aims at examining Big Data as a strategic asset. The paper examines how improving the efficiency of data management is facilitated by the utilisation of Big Data, while highlighting that the quality, governance, and ethical standard of data are important factors that will determine the accuracy and reliability of the insights derived from this source of data. By means of this proposed conceptual model, the study captures the possibility of Big Data on how contemporary management is practiced and indicates how future research in this emerging field can be approached. Of course, this paper's authors have endeavoured to provide the basis

strategic changes in the directions associated with data-driven management methods and also stimulate further production of valuable studies in this significant field.

*Keywords:* Big Data; data management; data-centric; data analytics; modern data management

## **Introduction**

BI in today's digital economy revolves around immensely expansive access to data and information that act as the backbone to powering several core business decisions. For this reason, managerial data need to be properly designed so that managers acquire access to the right data while companies must invest in data management systems that increase the visibility, reliability, security, and scalability of the data they use for managerial decision-making. Data management entails the capturing, categorising, preservation, and archiving of an organisation's data for optimal application in the business. With the creation and use of data at a growing pace in organisations, there is the need to make sense and manage the data hence the management solutions. The best that one can find in data management software modern enough is that it supports decisions with reliable and fresh information. These programmes underpin different operations ranging from data acquisition and curating to indexing, browsing, and compliance and enable the user to identify the right data for analysis and curation (Yaqoob et al., 2022). A good data management process is, therefore, the first crucial element that must be adopted for the application of big data analysis for the generation of important ideas that impact consumers and make the organisation productive. Effective data management means that everybody in the organisation ought to be able to find the data they need for their research; below are the benefits of a sound data management solution (Jansen et al., 2020).

*Visibility:* Data management can also increase awareness of an organisation's data resources so that people can quickly and easily get to the right data for their analysis. Enhanced information accessibility increases the efficiency of a company's organisation because employees can find the data and materials that are needed to complete the work (Diène et al., 2020).

*Reliability:* Data management reduces potential errors by establishing procedures and standards for data usage, thereby fostering trust in the data used for decision-making throughout your organisation. Companies with accurate, up-to-date data can respond more efficiently to market changes and customer needs (Fan & Geerts, 2012).

*Security:* Data management uses means of identification and protection of data from loss, theft, or breach to safeguard your organisation and its employees. Data security is an efficient way of making certain that certain company information is retrievable in case of failure of the initial medium. Furthermore, security is important especially if the data are of a personal nature that has to be

processed according to the rules and regulations of consumer protection (Huang et al., 2020).

*Scalability:* The management of data thus allows organisations to execute data and use occasions since it establishes standard operating procedures in updating data and metadata. When processes are easy to replicate, your organisation may reduce avoidable costs of replication including, personnel conducting the same research over and over again or running costly queries over and over (Gomes et al., 2020).

The definition of data management involves the assimilation, collection, arranging, and preservation of the data generated by a company or organisation. The appropriate data handling within the IT systems is crucial for the proper functioning of the business processes as well as for delivering the data to decide on to corporate executives, business managers, and the final consumers. Data management is the set of activities that contribute to the data accuracy and availability, as well as making it easily accessible. A significant portion of it is done by the IT personnel and data management departments. Still, business users come to the meetings also to guarantee that data fulfils its requirements and to act on the creation of internal data frameworks and rules as part of data management strategies (Tenopir et al., 2020). It signifies data as a corporate resource that could be used to make more efficient business decisions, improve marketing communications, increase the efficiency of the corporation's business processes, and save money that in turn would increase the overall revenue and the corporation's profits. However, data management that is not properly done shall see organisations with incompatible data sets, inconsistencies, and poor-quality data. Such defects hinder their capacity to implement BI and analytics systems – or, at worst, generate inaccurate results. Handling data has also become more significant due to emerging regulatory compliances such as data privacy and protection act such as the General Data Protection Regulation (GDPR) and the California Consumer Privacy Act. Firms in the modern world collect informative and extensive data at a consistent pace, which has promoted the use of big data architectures. But, if not well managed, these settings turn out to be highly complex to facilitate among the populations (Stedman, 2024). Big data is characterised by its three defining features: volume, velocity, and variety. These elements indicate that big data is more extensive, complex, and faster as compared to traditional data, albeit from new sources. Modern technologies for data handling are frequently challenged by these large and complex datasets. However, these enormous data amounts are capable of solving some business issues that were believed to be impossible to solve before. The three Vs of big data are described as follows and shown in Fig. 1.1 (Tiao, 2024).

*Volume:* Another key characteristic of big data is the overwhelming amount of information to be processed. As will be deduced from the above literature review, big data demands organisations to process large quantities of low-density, and unorganised data. Such type of data includes information of questionable usefulness, for example, tweets from X (previously, Twitter), web or application click-streams, and data from the equipment equipped with sensors. In simple terms, this might mean that some organisations may be dealing with tens of gigabytes of data daily, whereas others would be dealing with hundreds of petabytes.

**Fig. 1.1.** Three Vs of Big Data. *Source:* <https://www.oracle.com/in/big-data/what-is-big-data/>

*Velocity:* Velocity is the quick pace at which information is arrived at and possibly processed. Data are often written to memory at a faster rate than it is written to disc. Certain smart devices that depend on the internet work in real time or nearly real time, calling for real-time inspection and reaction.

*Variety:* Variety stacks for the kinds of data that are possible. Old data forms were built to match a relational database scheme where it is centrally located with one base table that can be linked to any other base table. With the increasing of big data, there are new unstructured data types. Therefore, it can be concluded that unstructured and semi-structured data formats like text, audio, or video data require additional pre-processing to obtain meaning and information.

Today, big data is considered one of the most valuable resources. A lot of global IT organisations, indeed, get a good amount of worth from their data, which is analysed on an ongoing basis with a view of improving the value chain and cumulatively innovating new products. There have been a lot of improvements in the costs of storage of data and the costs of computation hence the feasibility and the economical of storing large amounts of data. Thus, the availability of big data at a cheaper and more accessible level improves the chances of making better and more accurate business decisions. Deriving value from big data is a paradigm that goes far beyond the mere analysis of certain data; there should be a discovery process involved to do it right. It involves the key players: insightful analysts, business users, and executives who can ask the right questions, see patterns, assume things correctly, and forecast manners (Hancock & Khoshgoftaar, 2024). In general, the formation of the big data concept is much newer, but its roots can be traced back to the period of the 1960s and 1970s, with the birth of data centres and relational databases. By 2005, however, the data scenario changed dramatically, and today numerous consumers produce massive amounts of data with the help of web clients like Facebook, YouTube, and other Internet services. That same year, the Hadoop open-source structure was designed for the collection and processing of large amounts of data, and the NoSQL database also emerged. The arrival of Hadoop and more lately Spark as open source helped to define big data and make it more manageable and cheaper to store. Since then, the quantity of big data has grown at an exponential rate. User-generated content remains paramount with large amounts of data still being produced, but it is not solely human-driven.

This has led to people connecting devices such as home appliances to the Internet, thus establishing the so called Internet of Things. Furthermore, with the help of emerging technology such as machine learning, there has been a generation of even more data (Garcia et al., 2022). Given the vast amounts of data available to be collected, businesses and other organisations can use formulaic reasoning, including both advanced analytics and machine learning and natural intelligence, to separate and identify correlations and occurrences from those circumstances, that couldn't be identified earlier. Such knowledge enables organisations to make the right and timely decisions, improve processes and result-generating mechanisms, and design customer-oriented solutions. For example, in the retail industry and context with big data: it hints at using consumer behaviours to forecast the issues, timely replenishment of stocks, as well as utilising marketing approaches to specific needs – all these measures work to increase sales and customer satisfaction. In healthcare, it facilitates the prediction of disease occurrence, diagnosis and treatment of patients and subsequent results. However, big data plays a critical role in facilitating the 'compliance' function in trading businesses and financial organisations such as fraud detection, risk management, and investment strategies. The public sector too uses big data mainly to increase safety, shape the city, and offer better public services. In summary, the possibility to obtain value from big data not only stimulates the development and competitive advantages of an organisation but also supports societal improvements and economic progress. According to Wikibon, worldwide Big Data market sales for software and services are expected to grow from \$42 billion in 2018 to \$103 billion in 2027, with a compound annual growth rate of 10.48%. Forrester expects that the worldwide Big Data software industry will be worth \$31 billion this year, up 14% from the previous year. The worldwide software market is expected to generate \$628 billion in sales, with applications accounting for \$302 billion. According to an Accenture report, 79% of corporate executives believe that organisations that do not adopt Big Data would lose their competitive advantage and risk extinction. Even more, 83% have undertaken Big Data initiatives to gain a competitive edge as shown in Fig. 1.2 (Columbus, 2012).

The research problem this chapter seeks to solve is the problem whereby organisations have moved from gathering vast amounts of Big Data and how such organisations can transform this big data into valuable insights that can be used in strategic decision-making to improve competitive advantage. There is great recognition of the Big Data benefits, but one of the major problems is the lack of a proper understanding of how new data analysis methodologies can be used to gain insights from large datasets. Consequently, this chapter aims to identify the theoretical frameworks, approaches, and tools required for organisations to implement the full opportunities of Big Data as well as cope with the challenges of Data Quality, Data Governance, and Data Ethics. The objective here is to present a theoretical model for the successful application of Big Data in management, which in turn will help to enhance the development of strategic utilisation of data while promoting research on this topic.

### Research Questions

- How do organisations gain from the use of big insights gleaned from the big data?
- Which are the significant drivers that shape the generation of useful information out of big data?

### Research Objectives

- To investigate the various ways by which organisations benefit by getting big insights from big data analytics.
- To understand the different factors that affect the process of generating meaningful and comprehensible insights from big data to add knowledge to the larger discussion of its uses.

### Research Problem

- In furtherance, the study aims at finding how organisations use the big insights gotten from the big data analytics for better decision-making and performance.
- To understand the factors that define the generation of useful and practical knowledge from big data for the further development of the discussion on the utilisation of big data in organisations.

### Research Methodology

The study incorporates a comprehensive literature evaluation conducted utilising three main databases: Science Direct, Web of Science, and Google Scholar. These databases were chosen for their comprehensive coverage of academic publications from a wide range of subjects. The goal of the literature review is to collect current and relevant information on the influence of green manufacturing on the economy, society, and the environment. The first step is to search the proper

databases for terms linked to big insights, big data, and their use in the organisation. Search criteria might include 'big data', 'Data insights', 'Data Management', and 'Data-Centric'. These studies are then carefully screened to include only the most relevant ones for further analysis and synthesis of their findings. This filtration process takes into account some aspects such as whether the study meets the inclusion criteria, the applicability of the articles about the topic of research, and the year of publication. The relevance of the articles is determined according to their consistencies with the set objectives of the study while at the same time contributing useful information on the formulated research question. Another criterion is the date of publication, which makes a more certain that the study will proceed concerning the most recent and valid material. Moreover, the requirement of access to the full text is a secondary criterion since the evaluation of the study often involves examining methodologies, results, and conclusions. The articles that do not fit the above criteria especially those that do not directly answer the research questions or offer little and relevant information on the subject are discarded. The main purpose of this selection is to find only those papers that would provide a comprehensive and solid analysis of how big data-derived insights and the organisations' successes are intertwined. Lastly, 34 articles are identified to be relevant to the topic and are scrutinised explicitly applying the inclusion and exclusion criteria, which makes the study based on the best number of relevant papers. These publications are reviewed and analysed carefully to extract key results, techniques, and theoretical views on the influence of green manufacturing on the three priority areas. The findings of the evaluated publications are synthesised to highlight common themes, trends, and insights about the data insights from big data that help in data-driven management.

## **Big Data for Improved Decision-making: Modern Way of Working**

Analytics and big data are growing at an unprecedented rate. Data scientists and corporations are actively watching new patterns and modifying data to make it more useful. It is hard to exaggerate the strategic importance of big data in enabling improved decision-making and driving corporate innovation and competitive advantage. In today's world, when every data byte has the potential to unleash value, businesses prioritise both extracting high-quality insights that may influence choices and supporting the development and development of vast data lakes. The ability of leaders to forecast trends, adapt to change, and respond quickly distinguishes them from their followers ([Ghasemaghahi, 2020](#)).

Big data helps organisations act more promptly and make decisions based on promptly gathered information. Classic decision-making used to depend on historical records, instinct, or small data sets and, therefore, was always distorted and non-objective. Nonetheless, what is peculiar to big data is that a massive amount of current data is analysed, which gives organisations a complete picture of current business processes. This real-time analysis enables the managers to quickly notice any seasonal variations, or cyclical variations or single out any variation as constituting an opportunity or threat. It also helps in predictive analysis, which

enables analysts to forecast future patterns and trends. Through machine learning and statistics, organisations can gain a relatively accurate forecast of customer behaviour, markets, and operation performance. In retail, the use of predictive analytics would entail predicting the amount of demand for a certain product or service through analysis of historical data, and consequently, it will avoid the worst scenario, either being faced with excess inventory or holding inadequate stock. In finance, it can forecast the tendency of markets, which is extremely useful in investments and risk assessment. Such an approach increases awareness of the possible future outcomes and allows organisations to avoid the reactive approach to the problem instead of the proactive one (Barlette & Bailleite, 2022).

Understanding customers through data collected from different sources like social media, buying behaviour, online activities, and others, organisations can get to understand their clients' needs, and problems. This information is very useful in coming up with a marketing strategy since it is the clients' wish list they do not want the world to know. Amazon and Netflix have adjusted their services via big data, suggesting consumer items or movies that match his/her preferences, making customers happier and more loyal to the companies. Thus, big data serves the purpose of enhancing the communication between the organisation and the customers and bringing an increase in revenues. Big data is also vital to business operations and cutting operating expenses. Using operational data, it is possible to determine where problems occur within a business, where certain steps slow the process down, or through which processes resources are wasted. For instance, big data analysis in the manufacturing industry can determine the state of the used equipment and the time that should be scheduled for repair without causing significant losses. In operations, it can address orders and supply operations by determining the best way to deliver what is needed when and where it is required, and trim fuel and transportation overhead expenses. These operational improvements eliminate costs and increase the production and efficiency of the organisation (Matheus et al., 2020).

Another area where big data analysis is also incredibly useful is in risk management. Business organisations are confronted with several risks which may be; financial risks, operational risks, and reputational risks. Many of these risks can be minimised through the application of big data analytics as patterns and trends associated with such risks can be detected. For instance, in financial organisations, big data helps to identify fraud deeds by considering the patterns of transactions and the deviations from the normal process. Supply chain management can predict disturbances arising from such things as weather, political trends, or problems with suppliers, so organisations are prepared for events in the event of their occurrence. Areas of business risks are crucial for considering and managing in advance to prevent costly disorganisations of the activity. The technologies supported by big data generate innovations and products in organisations. Through market analysis, consumers' responses, and competitors' actions, organisations are in a position to realise areas of untapped markets and subsequently create new products or services to fit those markets. The automotive industry has applied big data to enhance methods of driving and customers' preferences, thus, creating new features and automating the vehicle's driving. In the field of healthcare, big data can help construct individualised treatment plans and find
